

DIMELI4AC

## Digital and Media Literacy for Active Citizenship

A tool kit for promoting critical thinking and democratic values

In recent years, the ability to **read and interpret different types of media** has become an increasingly essential skill to possess as most of the information we receive on a daily basis comes to us through a complex and interwoven system of media technologies.

In response to this need, the DIMELI4AC project seeks to support the **development of digital skills** among **students** aged 10 to 15, empowering them to become **responsible digital citizens** in an increasingly interconnected and digitalized world.

The project aims at developing several educational resources:

A **comprehensive Tool Kit** to support schools in the development of their own Digital Media Literacy Action Plan for active citizenship.

A **multilevel Educational Pack** including interactive learning resources (videos, games, simulations etc.) and two upskilling programmes for teachers and parents dedicated to the acquisition of digital and media literacy skills.

A **dynamic and interactive Platform** with different purposes and functionalities, including an *e-Ambassadors* communication platform for teachers and students to disseminate examples of their work; an *e-Tool Kit* database collecting resources, materials and good practices; and an *e-Academy* offering online courses for teachers.

A **Competence Framework** with in-built benchmarks and indicators against which the skills acquired by students will be evaluated.

An **Assessment and Validation Tool** (in the form of a game with an avatar) meant to monitor, record, evaluate and validate the acquisition of digital and media literacy skills.

**Digital and Media Observatories** accompanied by the launch of a strong multidisciplinary campaign as well as the setup of a Digital and Media Ambassadors Network with key personalities.
